2. Milly and Billy are playing a guessing game. Milly thinks of a number between 1 and 1000 (inclusive) and Billy can either guess Milly's number or ask a "higher" or "lower" question, Milly will only answer "Yes" or "No".

For example, if Milly was thinking of 142 the game might go

*Billy: Is your number higher than 600?*

*Milly: No!*

*Billy: Is your number lower than 200?*

*Milly: Yes!*

*Billy: Is your number 23?*

*Milly: No!*

How many questions must Billy ask to be **sure** of guessing Milly's number?

3. The mathematical symbol  $\otimes$  has a special meaning as follows:

$$a \otimes b = (a + b) \times (a - b)$$

For example

$$6 \otimes 4 = (6 + 4) \times (6 - 4) = 20$$

(i) Calculate the value of  $8 \otimes 5$

(ii) Work out the values of  $p$  and  $q$  if

$$p \otimes q = 40$$
